DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING
(2023-2024)

Internship and mini project based on python programming with Data Engineer

Project title: scholastic achievement dashboard

In accordance with requirement of degree of
BACHELOR OF TECHNOLOGY
In
ELECTRICAL AND ELECTRONICS ENGINEERING

Submitted by:
B.NAGA POOJITHA
21KQ1A0201

Date: 11-06-2024

STUDENT'S DECLARATION

I ,**B.NAGA POOJITHA** a student of **Bachelor of Technology** Program, Reg. No. **21KQ1A0201** of the Department of **Electrical and Electronics Engineering, PACE Institute of Technology andSciences, Ongole** do hereby declare that I have completed the INTERNSHIP AND MINI PROJECT BASED ON PYTHON PROGRAMMING WITH DATA ENGINEER, Department of **Electrical and Electronics Engineering**.

(Signature of student & date)

OFFICIAL CERTIFICATION

This is to certify that **B.NAGA POOJITHA** Reg. No. **21KQ1A0201** has completed his/her INTERNSHIP AND MINI PROJECT BASED ON PYTHON PROGRAMMING WITH DATA ENGINEER under my supervision as a part of partial fulfillment of the requirement for the Degree of **Bachelor of Technology** in the **Electrical and Electronics Engineering**

This report is accepted for evaluation.

Faculty Mentor **Head of the Department**

Scholastic achievement dashboard

Description:- Firstly, it computes the total marks for each student by summing up their scores across all subjects. Secondly, it identifies the minimum and maximum marks attained by each student, providing insights into their performance spectrum. Furthermore, the code sorts the marks of each subject, allowing for a clearer understanding of the distribution and trends within individual subjects. Lastly, it ensures accuracy by avoiding the duplication of marks while calculating the total sum for each student, thereby presenting a reliable overview of their scholastic achievements. By integrating these functionalities, the code offers a comprehensive and organized platform for assessing student performance, aiding educators, students, and parents alike in monitoring progress and identifying areas for improvement.

Requirement:-

1.sum of all subjects score of each student
2.sorting of total score
3.printing the sum of all subjects of each student without duplicates.
4.minmum,maximum marks among all subjects of each student.
5.average marks among all subjects of each student
6.sorting of each student marks in all subjects
7.maximum score in each subject
8.minimum,maximum of sum of total marks in all subjects.

Approach:-

1. Finding the sum of all subjects:
I can create a function that takes in the marks of each student as input and calculates the sum of all subjects for that student. Within this function, you'll iterate over the marks for each subject and accumulate the sum.
2. Minimum and maximum marks gained by each student:
Similar to finding the sum, We can create a function that takes in the marks of each student as input and calculates both the minimum and maximum marks. Within this function, I iterate over the marks and update variables to track the minimum and maximum values.
3. Sorting of each subject's marks:
For this functionality, We can create a function that takes in the marks of all students for a particular subject and sorts them in ascending or descending order using Python's built-in sorting functions (sorted() or .sort()).
4. Avoiding duplicate sum of marks:
To prevent counting the same subject's marks multiple times for a student, I can use a data structure like a set or dictionary to keep track of which subjects have been included in the total sum calculation for each student. Before adding marks to the total sum, you'll check if the subject has already been included.

Code:-

```
import pandas as pd
s=[]
def data(name,roll,marks,total):
    student={
        'name':name,
        'rollnumber':roll,
        'marks':marks,
        'total':total
    }
    s.append(student)
n=int(input())
for i in range(n):
    name=input("enter student name:")
    roll=int(input("enter roll number:"))
    marks=list(map(int,input("enter marks:").split()))
    total=sum(marks)
    data(name,roll,marks,total)
df=pd.DataFrame(s)
print(df)
b=[]
for j in range(n):
    a=s[j]['total']
    b.append(a)
print('max total=:',max(b))
print('min total=:',min(b))

b.sort()
print('sort total=:',b)
print(set(b))
c=[]
for k in range(n):
    d=s[k]['marks']
    c.append(d)
for p in range(n):
    print(f'maximum score of student{p+1}:',max(c[p]))
    print(f'minimum score of student{p+1}:',min(c[p]))
    print(f'total score of student{p+1}:',sum(c[p]))
    print(f'average score of student{p+1}:',sum(c[p])/len(c[p]))
    c[p].sort()
    print(f'sort of all marks {p+1}:',c[p])
    print(f'score of each subject without duplicates:',set(c[p]))
m=[]
for j in range(len(marks)):
    for i in range(n):
        m.append(s[i]['marks'][j])
    print(f'maximum marks in subject {j+1}:',max(m))
    m.clear()
```

Output:-

```
20
enter student name:pooji
enter roll number:201
enter marks:7 8 2

```

Explaination:-

First we take N no of inputs, then we write a for loop to iterate our data N times, then we create a function in that take an empty set whenever we call the function name it redirected to the function and store the data, our stored data appended into an empty list s.we can extract our data using the index(s[i]) create a empty list then,write a for loop to store the student marks in each subject in that empty list.then by using min,max,len functions we have to find our required data.create another for loop to store marks of each subjects and store them in an empty list.then print our required output.

Conclusion:- our Python code for the student scholastic dashboard efficiently computes total marks, minimum and maximum scores per student, sorts subject marks, and ensures accurate summation without duplication. This comprehensive tool offers educators, students, and parents valuable insights into academic performance, facilitating targeted interventions and informed decision-making. Overall, our program streamlines academic assessment, aiding in optimizing student learning outcomes and fostering academic success.
